Terraform

**cdktf**

```

using System;
using Constructs;
using HashiCorp.Cdktf;

using aws;

namespace MyCompany.MyApp
{
    class MyApp : TerraformStack
    {
        public MyApp(Construct scope, string id) : base(scope, id)
        {
            new AwsProvider(this, "AWS", new AwsProviderConfig {
                Region = "us-east-1"
            });

            new Instance(this, "hello", new InstanceConfig {
                Ami = "ami-2757f631",
                InstanceType = "t2.micro"
            });
        }

        public static void Main(string[] args)
        {
            App app = new App();
            new MyApp(app, "hello-terraform");
            app.Synth();
            Console.WriteLine("App synth complete");
        }
    }
}

```
